Cost Navigator

Visualize and Analyze Samsung Cloud Platform Service Costs

Cost Navigator helps users easily analyze and manage Samsung Cloud Platform service costs. By analyzing the total costs across all accounts within an Organization, it enables you to identify cost trends and estimated costs, supporting efficient budget management.

Visualize Data

Samsung Cloud Platform service costs are presented through a variety of easy-to-understand graphs. Grouping and filtering capabilities make it easy for users to understand cost trends and usage patterns from whichever perspective they need.

Rapid Cost Analysis

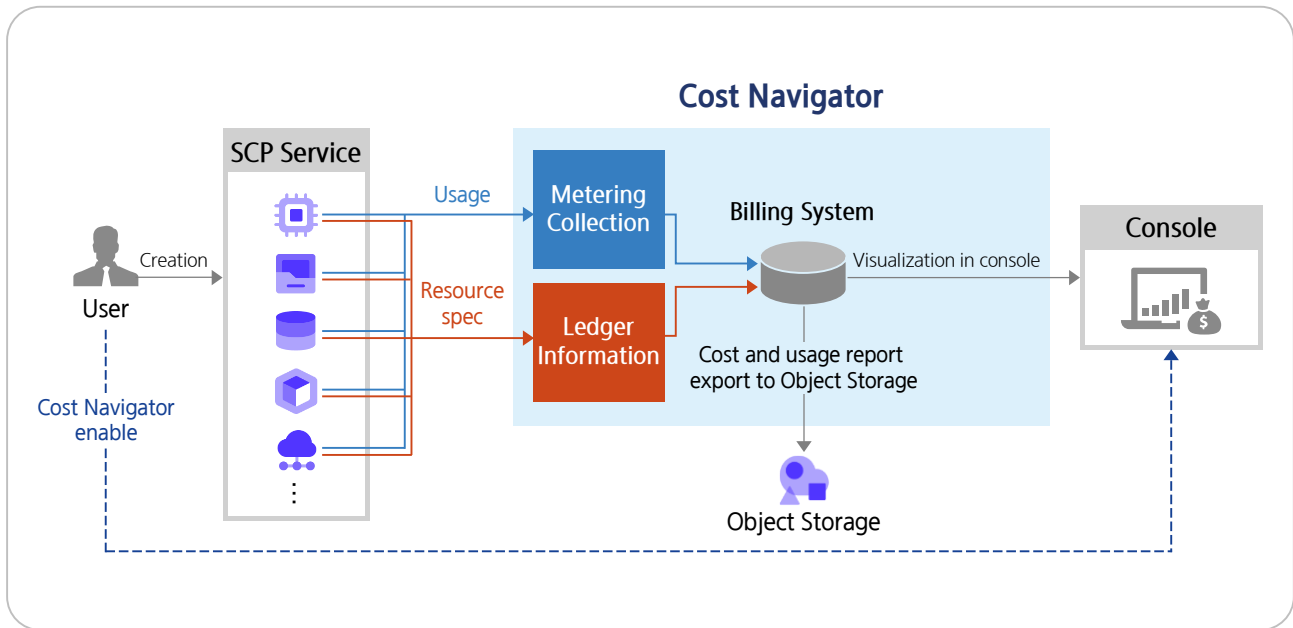

Frequently used grouping/filter combinations can be saved as reports to quickly start repetitive analysis tasks. Highly usable grouping/filter types are provided in advance, so users can use them immediately without additional settings.

Efficient Budget Management

Cost Navigator analyzes the total cost of services used across all accounts within your organization to identify cost drivers, making it easy to see actual savings achieved through Cost Savings or Planned Compute agreements. It also supports data-driven decision-making based on detailed, monthly cost analysis.

Service Architecture

Key Features

- **Visualization graphs**
 - A variety of graphs provided for easy cost analysis
 - Display budget amounts on charts so you can easily see budget overruns or remaining balances at a glance
- **Grouping/filtering**
 - Customizable analytics with data grouping and filtering
 - Cost analysis based on a variety of conditions
- **Customized reports**
 - Save frequently used grouping/filtering settings for quick reuse
 - Frequently used grouping/filtering settings are provided as default templates
 - Automatically save Cost and Usage Reports(CUR) to Object Storage for large-scale data analysis
