

Management ID Center

User account access control and privilege management

ID Center is a service that helps companies easily create and manage users and user groups on the Samsung Cloud Platform. This allows to configure control policies for services within an account as a set of permissions and assign them to users.

Efficient User Management

By registering a user once in the ID Center and configuring a set of permissions and applying them to multiple accounts, customer can manage user access in a visible and systematic way. It can be easily managed user additions and account assignments in bulk by utilizing user groups.

Optimized Access Control Policy Operation

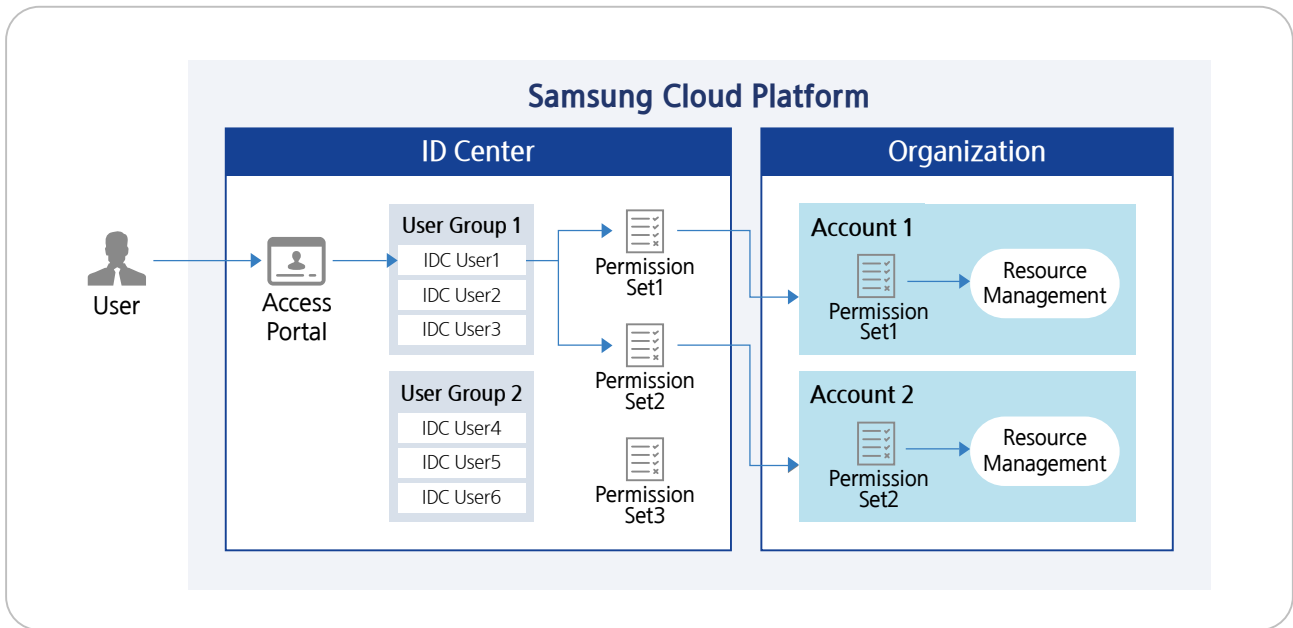

It can be created access control policies for control/action/resource type and authentication method/IP at a granular level for each service. This allows to apply a least privilege policy when granting access to cloud resources, allowing for appropriate access control for each user.

Strengthen Account Security

Through a separately provided access portal apart from console login, ID Center users are allowed access to the account assigned to the with a limited set of permissions. This can strengthen account security by fundamentally preventing unauthorized users from accessing the account.

Service Architecture

Key Features

- **Integrated management of authentication data**
 - ID Center creates users on its own and manages users within the organization in an integrated and efficient manner through user groups
 - Register ID Center users in conjunction with customer's AD(Active Directory)
 - Set account-specific access rights for ID Center users through permission sets
- **Efficient resource management**
 - Centrally control access to resources across multiple accounts through ID Center
 - Centrally managing charges accrued costs and resource usage policies by all accounts in integration with the Organization service
- **Strong access control**
 - Provide separate access portals for users within organization through ID Center settings
 - Provides enhanced security features that allow access to resources only with the account and permission set assigned to the user
