Planned Compute

Discount Service Based on Instance Type Commitment

Planned Compute is a discount service that can be committed based on the type and quantity of instances to be used, with a one- or three-year contract and up to a 55% discount. This is a useful discount service for accounts that use the same type of instance.

Offering Savings

Commitments that use specific types of instances in the Compute, Database, and Data Analytics service categories offer Planned Compute discounts. Discounts are offered in the order of application when applying for the same instance as the committed type (vCore/Memory/OS), and discounts are not offered if the commitment quantity is exceeded.

Supporting Various Features

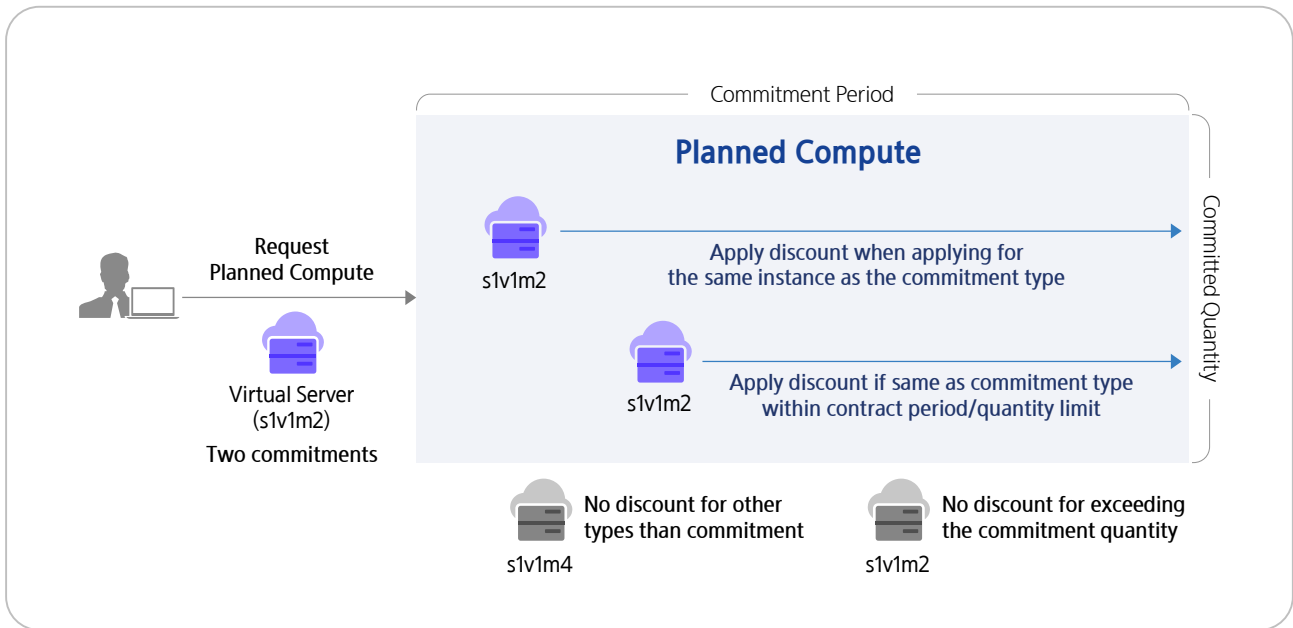

Planned Compute provides various features such as service application, extension and changing a server type. When applying for Planned Compute, users are required to specify services eligible for savings, its operating system, a server type, commitment term, and quotas.

Easy Management & Monitoring

Using a list of Planned Compute, users can check the usage of Planned Compute and modify the terms and conditions in their commitment when necessary. Also, it allows users to see the savings achieved by Planned Compute compared to on-demand pricing through the coverage report.

Service Architecture

Key Features

- **Request Planned Compute**
 - Users specifying an eligible service, operating system, server type, commitment term and quotas
- **Change the terms and conditions**
 - Reservation for extension of commitment period is possible
 - Changeable to increase the specifications of an commitment instance
 - Changeable to add commitment quantity
