

Management

Quota Service

Manage Service Quotas for Samsung Cloud Platform Accounts

Quota Service is a service that manages quotas, which are the maximum number of resources, tasks, and settings set for each Samsung Cloud Platform service within an account.

Quotas are limits set to ensure high availability and stability for customers and prevent unintended over-usage, and can be conveniently managed in one place through Quota Service.

Centralized Management

Quota Service allows you to conveniently manage over 100 service quota items, including the number of Virtual Server instances, VPC, and Firewall settings, from a single console.

Flexibility and Scalability

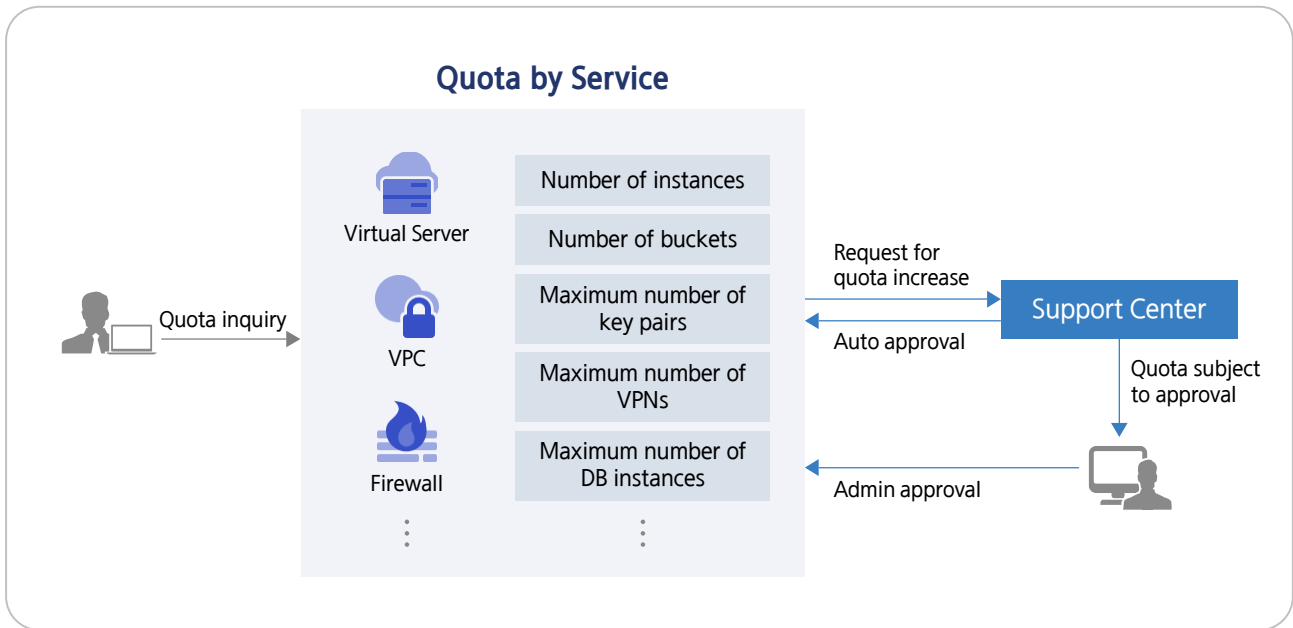

Users can conveniently view and request increases in one place using Quota Service. When a quota increase request occurs, some are processed quickly with automatic approval. Quotas can be managed in detail at the account level as well as the region level, and adjustable quotas can be expanded to meet the growth of the business.

Cost-Effectiveness

Quota Service is provided free of charge, and Samsung Cloud Platform users can manage quotas to prevent increased costs due to unintended resource over-use.

Service Architecture

Key Features

- **Provide quota**
 - Default quota : Initial values set for each Samsung Cloud Platform service
 - Applied quota : Increased value approved by user request
 - Adjustable quota : Some quotas can be requested for increase, some are fixed values
- **Inquiry quota information**
 - Default quota by service, applied quota, and whether it can be adjusted
 - Provides region-level quotas and account-level quotas separately
- **Request for increase in quota**
 - Handle quota increase requests through a single interface via the console
 - Ability to track request status(pending, approved, rejected)
- **History and analysis**
 - Check past quota increase request history and usage trends
 - Use it to plan and optimize resources
