Certificate Manager

Integrated Management and Registration of SSL/TLS Certificates

Certificate Manager service protects websites and applications that use Samsung Cloud Platform with registered SSL/TLS(Secure Sockets Layer/Transport Layer Security) security certificates.

Web-based integrated management features support convenient certificate management, from viewing certificates to expiration notification setting.

Simple Certificate Registration/Deletion

SSL/TLS certificates issued by an external institution can be registered/deleted, and validity of certificates is checked for registration. Users can configure HTTPS for Load Balancer using certificates registered with Certificate Manager.

Viewing/Managing Certificate Data

Certification information, such as the date of creation or expiration as well as common name, is available using a web-based console. The expiration notification email function provides notification when to replace the certificate.

Service Architecture

Key Features

- **Certificate registration and integration**
 - Register SSL/TLS certificate issued by CA
 - Create self-signed certificates for development and test
 - Integrate SSL certificates registered with the Load Balancer(Listener)
- **Certificate management**
 - View registered certificate(common name, effective date, expiration date and linked resources)
 - Send email notification 45 days/30 days/15 days/7 days/1 day before the expiry date
 - Set up recipients for certificate expiry notifications
