Compute

Virtual Desktop

Virtual Desktop Service that Offers Public DaaS Environment

Virtual Desktop allows users to access the workspace over various devices from anywhere, at anytime. It offers DaaS service over the internet which is isolated from the actual workspace, with a reliable and high-quality service guaranteed based on our extensive experience and strong capabilities in cloud and virtual desktop operations.

Optimized Virtual Desktop Environment

Users have access to a virtual desktop environment that is optimized for the internet connection from anywhere at anytime. From any location, users can use an internal or external launch portal to access users VM and the internal work system, which thereby enhances productivity.

Robust Security

Virtual Desktop helps deliver an efficient and robust security environment by offering various security features such as unsafe website blocking, screenshot protection and watermarking, SecuPrint and multi-factor authentication (MFA).
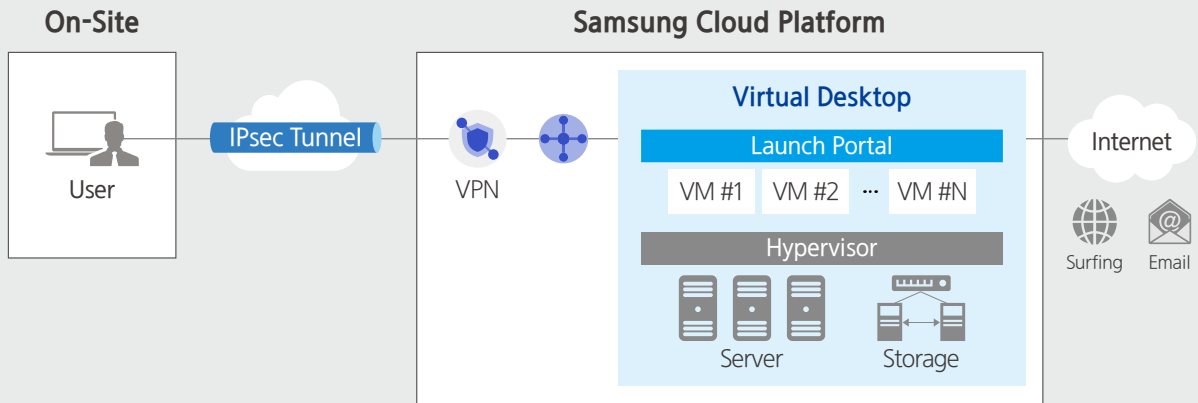

Stable Operation

With a professional security team for IT infrastructure and a service help desk operating 24/7, prompt response to service requirements and any failure is guaranteed. In addition, system diagnosis is carried out regularly to prevent failure and enhance performance.

Business Continuity

It ensures reliability in DaaS environment by configuring DR in case of a failure caused by natural disaster (earthquake, typhoon, flood and fire) and other external factors.
