

Compute

Bare Metal Server

High Performance Physical Servers without Virtualization

Bare Metal Server offers independently assigned and physically separated CPU, memory and other computing resources without virtualization technology. The high performance cloud computing service is sheltered from other cloud users, enabling stable operation of performance-sensitive services.

Easy Computing Environment Configuration

Easy-to-use self service from BM provisioning to monitoring and billing is provided using a web-based console. Standard spec (CPU, memory, and disk) servers can easily be created to be used immediately and resource usage information is also readily available.

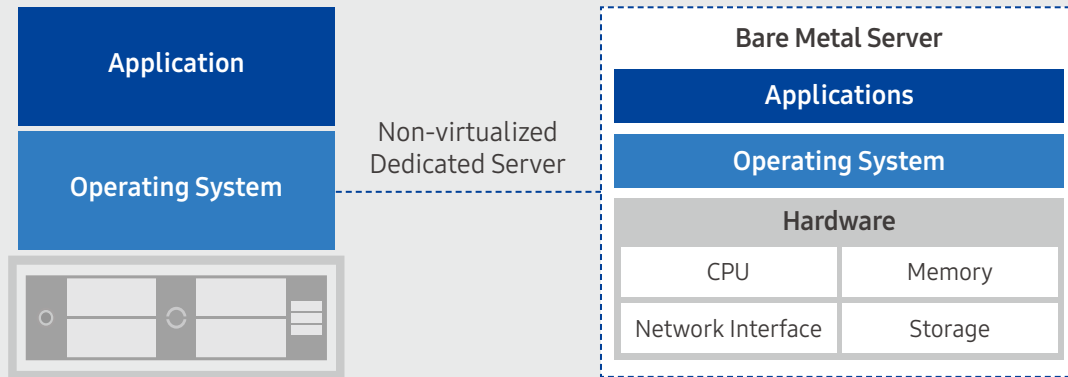

High Performance Computing Environments

The servers are physically separated and more suited for workload requiring high capacity and high performance, such as real-time systems, HPC (High Performance Computing) and servers with excessive I/O usage.

Efficient Service

Based on our extensive experience as a service provider, Samsung SDS offers an optimal server and goes through internal testing to guarantee performance and reliability. Customers can choose the best resource for their service environment using the Bare Metal Server with varying specs on the Samsung Cloud Platform.

Service Architecture

Key Features

- **BM creation/management**
 - Provide various instance types of standard spec
 - Offer various OS types and standard images for creating resources conveniently (e.g. Windows, RHEL, Ubuntu, Oracle Linux and Rocky Linux)
- **Storage and network connection**
 - Provide additional connection storage besides OS disk
 - Subnet/IP setting and linking with VPC Firewall
 - Provide local subnet setting for communication between servers
 - Provide NAT IP setting for external internet connection
- **Convenient service management**
 - Adding/editing/deleting tag
 - Uses Init Script

Pricing

- **Billing**
 - Without contract: Hourly billing for the actual usage according to the on/off status of VM
 - With contract: Discount applied according to 1/3 year contract terms. Fixed monthly charges for the amount of requested resources
 - * Penalty is charged for early termination within the contract period.
- **Add-on options**
 - Additional charges for add-on offering/options, including Reserved IP
