GitHub Enterprise

Git-based SW Development and Cooperation Platform

GitHub Enterprise is a platform service that makes SW building and sharing easy and effective for developers. Integrated platform for continuous sharing and development of source code, non-linear workflow for collaboration, and monitoring and auditing functions for administrators facilitate effective SW development and collaboration.

Easy-to-use Development Environment

Project board helps visualize the process and prioritize tasks. In addition, having an at-a-glance view of complex code reduces coding errors and ensures that high quality code is merged. Matrix build functionality also allows simultaneous testing on various operating systems and runtime versions.

Achieve Seamless Collaboration

Developers can use custom workflow in other repositories, enabling seamless collaboration between collaborators. On the repository setting, users can grant an optimal level of access to collaborators which ensures efficient management of private and public tasks for team projects.

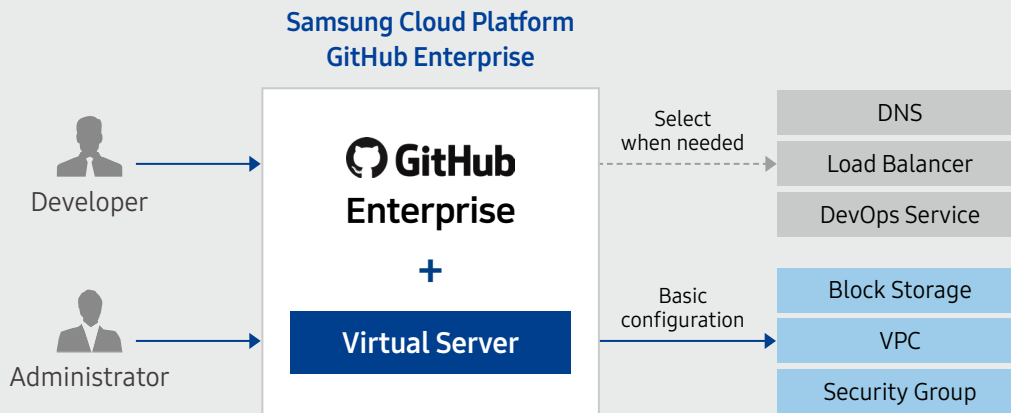

Detect Security Vulnerability

After automatically analyzing security vulnerabilities and all commit for open source modules used in the On-premises GitHub repository, users will be notified of security vulnerabilities, making safe source code integration possible. To prevent information leakage, a security alarm is generated when token information is written in a private repository while switching to a public repository.

Workflow Visualization

Visual-based workflow graph helps with reducing the time spent understanding workflow as well as checking progress and problems.

Service Architecture

Key Features

- **Easy-to-use development environment**
 - Automate development environment through integration with DevOps Service
 - Support various languages : Java, JavaScript, .NET, Python, Ruby
 - Provide web-based GUI
- **Strong collaboration tool**
 - Provide Wiki and job tools for collaboration
 - Use custom workflow in another repository
 - Use the workflow generated by other user in private repository
- **Enhanced security feature**
 - Provide access control for security
 - Provide code scanning and secret scanning
- **Workflow visualization**
 - Provide visual workflow graph
 - Checking progress and identifying problems are easy

Pricing

- **Billing**
 - GitHub Enterprise license is on a BYOL(Bring Your Own License) basis
 - Provide 100GB OS disk for free. Pricing for Block Storage applies for additional volume
