

Integrated cost/ resource management through Cloud in One

We set standard policy customized for each of corporates to manage cloud resource and cost from FinOps point of view. Through this policy, the FinOps level can be measured in a quantitative manner and required optimization activities for target tasks and resources can be identified.

When the optimization is executed through each of the role players data-based review, the result will be considered as performance, therefore, enhanced FinOps level from corporate-wide perspective can be identified. Through Cloud in One, these activities will be repeatedly carried out.
