THE SOLUTION:

AID, powered by Samsung SDS, special customized and rebranded solution.

AID is a unified Command and Control platform utilizing Push-To-Talk-over-IP technology.

AID brings the power of Command, Control and Communications at the palm of a smartphone or tablet.

AID is able to meet any demanding level of communication needs that helps an organization to maximize the operational effectiveness in the minimum time and with the highest grade of security.

AID is a force multiplier: field officers provide real time information to the decision makers in the theater of operations. It is a platform built from tactical people for tactical people.

CUSTOMER NEED:

HRC is assisting thousand of people daily through the sections of Nursing , Rescue, Samaritans, Lifeguards and Social Welfare. HRC was founded in 1878 and is the main assisting organization in the country with international activities as well.

The need of an advanced command and control center adopting the most recent technologies , based on Push To Talk over IP, in order to coordinate missions was more than urgent.

The need of being in touch in real time with rescuers ,volunteers and people who need assistance in and out of the country was imperative. The need to coordinate different assisting organizations under one command and control center in a case of emergency was crucial for saving lives

HRC by adopting Samsung SDS technologies will be able not only to modernize it's operational center but also to provide more efficient services to people who need them and finally to contribute to emergency situations with the most advanced technology provided today. AID is a solution not only for HRC but also for all relevant national and international organizations .I would like to thank Samsung SDS for it's contribution.

Dr. Andreas Mamantopoulos
President of Hellenic Red Cross
