

Malicious Code Monitoring Service

A security monitoring service that detects the incoming malicious code into internal PC via internet, cuts off communication between malware publisher and C&C server¹⁾ and prevents data leakage

‘Detection, Blocking and Action’ Service for Malicious Code Detection and Response

- **Detection** : Detect the incoming malicious code into internal PC as well as malware publisher
- **Blocking** : Block malware publisher and access attempts to C&C
- **Action**: Provide an alert and action guidelines against infected PCs

1) Smart Sensor : Equipment that collects / analyzes / blocks malicious code on the network
2) Smart Grid : Dynamically analyze unknown malware and share the analyzed information to Smart Sensors
