

# Cloud Security Service

Secure cloud security services including intrusion detection and web shell detection without modifying the virtual infrastructure architecture of your public cloud with Samsung SDS, Korea's largest global managed security and managed cloud services provider.

Taking into consideration the specificity of cloud environment, security control of malicious web shell attack and abnormal behavior on homepage

## Why cloud security service?

- Physical security equipment can not be built
  - Software type security solution VM installation required
  - Low detection and VM usage issues to use physical equipment
- No log transfer traffic costs for AWS customers
  - In the case of other control companies, the cost is incurred when sending separate logs.
