# Key Functions

## All-in-One Collaboration Solution Nexoffice Mail

### Mail

Various features built for business mail are provided: automatic classification of received mail, grouping related mail, detailed search, and large file attachments up to 2 GB.

### Approval

Various approval paths can be designated, such as approve, consent, notification, and post approval. Approvals can also be carried out on other internal and external systems through system integration.

### PIMS

Easily register or check your own schedule or your colleague's schedule on PIMS. You can also connect PIMS with the Outlook app or another scheduling app.

### Searching Employees

Make a detailed search for an employee by name, job description, phone number, or organization

### Media

The internal communication service is optimized for the Mail home screen to show internal broadcasts, announcements, and anonymous bulletin boards without any additional introduction or system setup.

### Security

APT<sup>1</sup>, spam filters, and virus checks are used to prevent security threats in advance and encrypt saved mails and paths between sending. Security options, such as DLP<sup>2</sup> and DRM (CPGS)<sup>3</sup>, are provided.

### System Integration

Based on Restful API, integration with the internal legacy system as well as the external SaaS system is possible. Also, Single Sign On is supported.

### Integration between Nexoffice Solutions

On mail, the integrated usability of Nexoffice has been enhanced for seamless collaboration. Start Nexoffice Meeting or chat directly from mail and save attachments to Nexoffice EFSS.

<sup>1</sup>APT: Advanced Persistent Threat, <sup>2</sup>DLP: Data Loss Prevention

<sup>3</sup>DRM: Digital Rights Management

# Real-Time Communication Tool Nexoffice Messenger

## Searching for Chat Participants

The feature to search for messenger users by name, work, or telephone number is provided. The status of the participant can be checked by the presence indicator.

## Voice Chat

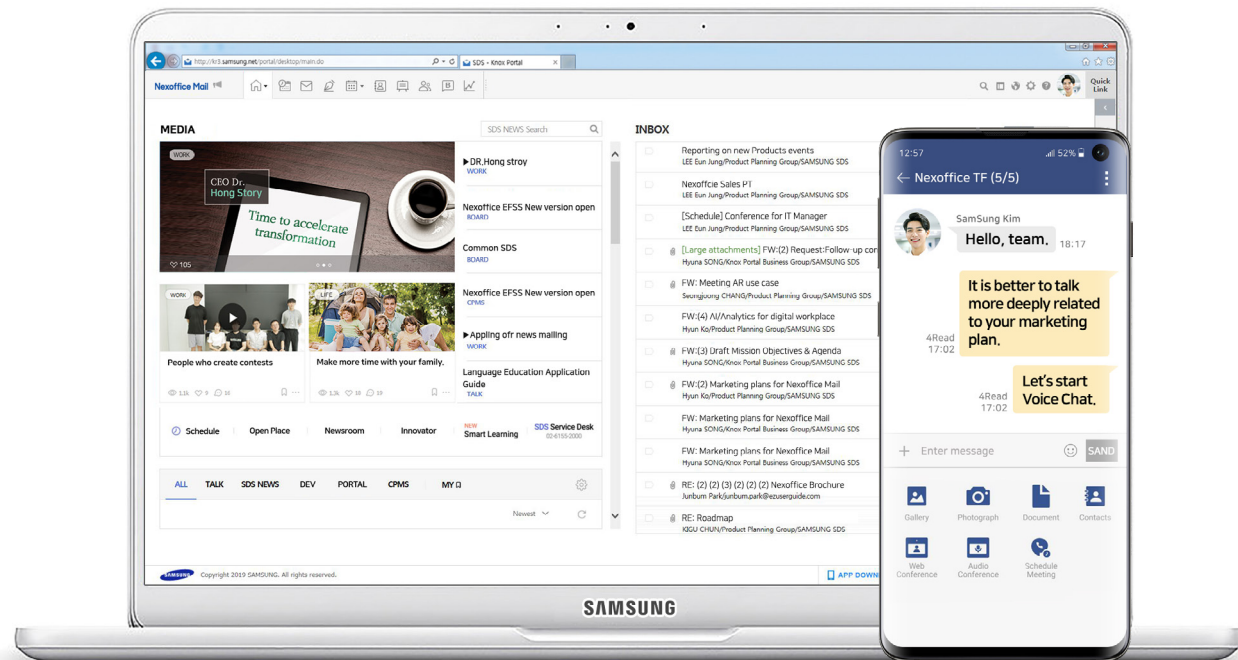

Start a voice or video chat immediately to have clear communication with the chat participants. Share the screen of your PC or mobile for better and more precise collaboration.

## Internal System Integration

On the messenger you can get information in real-time, such as the management index and field work data, by integrating with systems like SCM, PLM, and MES.

## Security

AES 256-bit and SHA 256-bit level encryption is applied. For the protection of work related chats, features such as screenshot prevention, call canceling, and secret chat are provided.

**Collaborating Culture for Success  
is Possible with Nexoffice Mail, Messenger.**

## Transform Your Working Ways

Everything from internal communication to work tools, like mail and messenger, are provided in one place to enhance your company's efficiency and methods of communication. Bring a positive change to your working culture.

## Increase Your Work Productivity

The features and user experience are optimized for collaboration and provided in the best way support fast and accurate collaboration. Various system integrations help to increase work productivity by reducing the amount of time spent in needless activities.

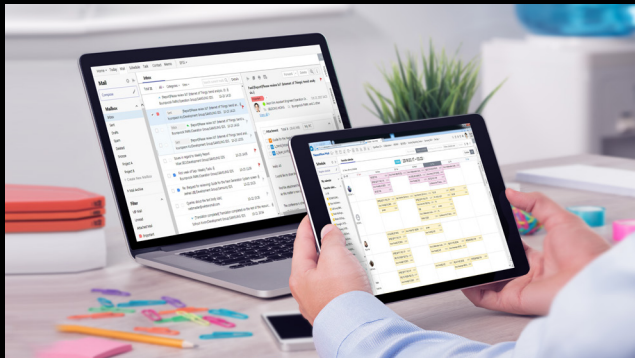

## Prevent Security Risks

Stronger security and compliance to protect the data of individuals, teams, and enterprises and to reduce risks incurred by the enterprise through safely protecting the online working environment.

Use Cases

# Unleash the potentials of Nexoffice

## Increase Productivity With a Wide Range of Collaboration Features

On the comprehensive compose screen, you can write mail and also register schedules and to-do-lists at the same time. When you receive mail that requires additional discussion, you can create a messenger chat room immediately with the relevant recipient list. Easily access integrated systems by SSO to report an approval. Like this, use many different collaboration features for faster collaboration.

## Easy, Convenient, Real-Time Communication

Clear collaboration can be made using voice chat if communication by entering text is difficult. Continue the chat on mobile or PC and stay connected while you are at the office or on the move. You can even share your mobile screen for more detailed discussions.

## Safer Business Through Security Features

When you are collaborating on new products, you can send encrypted mails by applying the confidential settings. You can also set the permissions for printing, viewing the recipient list, and more. In the messenger, you can recall messages that were sent and can also use encrypted messages in secret chat rooms to prevent copying and forwarding.
