

SAMSUNG SDS Nexoffice Messenger

There is a messenger specially designed for collaboration.

In today's rapidly changing environment with increased global market complexity and the introduction of the 52-hour work week, reinforcing productivity through innovation has become an essential component of growing a business.

Take a closer look at your messenger application first. Messengers are the most frequently used real-time communication tool at work.

There is one messenger application that provides you with a secure work environment that lets you make rapid business decisions and concentrate on your work without worrying about security issues.

SAMSUNG SDS Nexoffice Messenger

Nexoffice Messenger provides a secure work environment so you can effortlessly collaborate with your colleagues anytime, anywhere.

**A Cornerstone of Collaboration
Culture for Greater Growth Implement
fundamental changes fast and easy
with Nexoffice Messenger.**

Take teamwork to a whole new level with Nexoffice Messenger

Easy and convenient start

Provide an administrator site to easily register colleagues and set up a service environment. Our solution is intuitive and easy to use, meaning you don't need any additional training.

Collaboration accelerating features

Share your voice, video, or screen with a single tap and engage in an immersive collaboration experience. Also, enjoy unique features that help you focus on important business talks and better understand the context.

Powerful security features

Prevent data leaks with chat encryption and secure storage. Empower users to protect their data with powerful security features. Allow admins to flexibly set security levels depending on your business needs.

Key Functions

Collaboration-driven features that simplify complex collaborations

Contacts

Search users using various information types, such as name, department, telephone number, and job title. Then, create group contacts by tasks.

Invitation Option

Allow newly invited members of a chat room to view previously posted messages before they join a chat room so they can easily understand the context of the conversation.

Save to Important Messages

Save important messages and review them later, or receive notifications for selected keywords.

Reply

Reply to a specific message to retrieve it and fine-tune the details if an important message is lost in the middle of a long conversation.

Vivid voice chat for an immersive conference experience

Voice and Video Sharing

Instantly call a meeting and engage in an immersive conference experience with just a single tap. Invite on-site employees to join a voice chat and share your voice and video.

Screen Sharing and Annotation

Instantly share your PC or mobile device screen during a voice chat with just a single tap on the Screen icon. The digital whiteboard can also be used to sketch out ideas while sharing your screen.

Active Speaker

View the profile or video of the active speaker in real time. Pin a speaker to focus on a certain speaker.

* On iOS, the Important Message and Reply features will be available soon.

Worry-free Security and Integration with Enterprise Systems

Encrypted Chats

Take advantage of enhanced security with AES¹ 256-bit and SHA² 256-bit data encryption.

Secret Chat

Manage confidential information in your mobile app using secret chat rooms that don't save any data on the server.

Recall

Cancel sending messages you sent by mistake and decrease the chance of confidential information being leaked.

Integration into Enterprise Systems

Utilize Nexoffice Messenger's open APIs to integrate the messenger with various internal and external enterprise systems and allow users to complete certain tasks using the messenger.

¹ AES : Advanced Encryption Standard

² SHA : Secure Hash Algorithm

**Hype the productivity of your business
fast and easy with Nexoffice Messenger**

Enhance the Productivity of Collaborations

Improve work flow and enhance the productivity of collaborations in your business. Provide an immersive work environment by expanding the scope of collaboration to enterprise systems and providing various means of communication integrated with your business system.

Promote Work-Life Balance

Improve the work-life balance of your employees by providing an enterprise system for faster and more accurate collaboration, which will save on wasted time by simplifying the collaboration workflow with complex collaboration tools and systems.

Decrease Security Risks

Separate the messengers you use for work from the ones for private use. This is the first step in preventing security risks. Provide a powerful, secure environment for safe and convenient collaboration.

Use Cases

Unleash the potentials of Nexoffice

Fast and accurate global collaboration

Experience an immersive collaboration face to face with overseas colleagues without the need for additional preparation or equipment. Use a single tap to start a voice chat. Then, make quick decisions while sharing voices, videos, or screens.

Easy and convenient start for everyone

Our solution is intuitive and easy to use, meaning you don't need any additional training. Search users using various information types, such as name, department, telephone number, and job title. Then, customize the contacts. View previously posted messages before joining a chat room to understand the context better.

Smart integration with enterprise systems

Receive notifications from related enterprise systems by utilizing the open API, and take care of simple tasks on the messenger. Share important information, such as business indexes and equipment status, in real time via the messenger, which is a secured channel of information, and bidirectionally share the information to take instant action.
