Real-time Incremental Planning
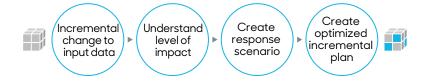

Improve customer service level through the real-time response system

This Week's Production Plan

Rush Oder

Adjust Delivery Schedule

New Demand

Next Week's Production Plan

Rush Delivery Request of 50,000 Products After One Week

☑ What should we do to satisfy the customer without changing the existing plan?

☑ What should we sacrifice to satisfy the request?

Incremental change to input data → Understand level of impact → Create response scenario → Create optimized incremental plan

If the delivery of the Demand B with low priority is delayed by a week, it is possible to deliver the Rush order, and the profit will increase
