Hybrid Cloud Platform :
Automated Global Operation

To respond to the shorter new product launch cycles and simultaneous global launches, rapid system development and organized global expansion are crucial. Samsung SDS provides Korea's first and only SRE (Site Reliability Engineering) model, enabling all IT resources to be codified for automated deployment. Reliable integrated operation is also ensured based on the global support and collaboration systems.

Global operational innovation to respond to rapidly changing retail market ⌄

Conduct changing work individually

Manage the script by county

Development Team

Lack of sharing changes, unable to respond fast

Operation Team

Implement SDS SRE model

❶ Codify infrastructure and deploy automatically	❷ Advance app deployment pipelines	❸ Build global collaboration systems
· Standardize script and offer integrated management · Automate infrastructure & S/W installation	· Establish build-deploy-test automation pipelines · Code as application setting	· Enhance development team's response system · Manage & rapidly respond to issues with collaboration tools
