

Samsung SDS MAXIGENT[®] Plus

Assessment

Assess your IT infrastructure quickly and efficiently for safer and more productive IT environment

Technological development in today's business environment requires more sophisticated corporate systems and higher workforce investment to operate them. Despite all your efforts to stay competitive, unexpected occasional system failures affect corporate image immensely resulting in poorer relationships with customers and eventually losing your competitive edge in the market.

For three decades as the devoted IT infrastructure provider for Samsung, we have gathered knowhow on how to operate IT infrastructure and developed insightful assessment items and methods for a wide range of IT infrastructure assets. Through our proprietary methodology and knowhow, Samsung SDS provides top class IT infrastructure assessment service to help you ensure a solid return on your IT investments.

Samsung SDS MAXIGENT Plus Assessment offers professional IT infrastructure assessment services including efficient automatic assessment on IT infrastructure to check configurations and security risks, find unknown latent vulnerabilities to prevent errors through preventive measures, and provide support for stable and reliable system operation.

Main Function

Market-proven assessment items based on 30 years of experience in providing IT services to the entire Samsung of more than 70 companies

- Assessment items reflecting a wide range of error analysis experiences
- Insightful assessment items developed by experts
