SAMSUNG SDS

Insator™

Gain Valuable Business Insights with Insator™

Samsung SDS Insator creates smart applications at the front of a connected data pipeline using standard APIs and a data message bus. In order to adapt to your business, it caters to both web-based and local development environments. Insator is a flexible platform that syncs with most of active domains.

Scalable IoT Connectivity

Easily connect your IoT devices using MQTT, CoAP, and Websocket with SDK

Support IoT standard spec such as OCF, oneM2M

Directly connect with short-range, low power network

Strong Platform Core

Securely manage IoT devices with SEAL, OAuth, DH, and SSL

Scalable architecture can process more than 50,000~100,000 EPS per node

Support both cloud and on-premise platforms

Application Enabler

Trigger your business service with rule script, customized app, and bigdata analytics

Connect actions of your application via APIs
