Simple and Secure Biometric Authentication for Cloud Platforms

Samsung SDS Nexsign provides simple and secure biometric authentication services on cloud platforms. In collaboration with IBM Bluemix, developers can easily adopt our biometric authentication so that users can access their apps without passwords.

Easy to Integrate

Easy to be integrated with any kinds of apps

Provide simple authentication methods using various biometrics

Market-Proven Reliability

Obtain performance stability for a large volume of transactions

Common Criteria validated and Glomo Awards winner in 「Best Mobile Security Solution」

Enhanced Development Efficiency

Minimize development cost in integrating biometric authentication with just a few clicks

Enable users to authenticate with biometric information immediately
