

Hybrid Integration Service : Hybrid Cloud

More customers are using hybrid/multi clouds to increase cost efficiency, avoid being locked-in to a single vendor, secure business continuity and leverage optimized services. Samsung SDS provides optimized architecture designs for each workload, taking into account cost, function, performance, reliability, migration convenience and more.

SAMSUNG SDS

Hybrid/Multi cloud-optimized architecture designs to secure business continuity

- Organize hybrid environments for essential/regular workload using private and AWS clouds, respectively, considering the importance of tasks and relevant laws/regulations

- Establish a DR system using 2 clouds for important data in the e-commerce system
