

SAMSUNG SDS

Remote Patient Monitoring

Deliver turnkey at-home patient monitoring with Samsung RPM

Deliver an easy-to-use monitoring solution for remote patient care. Send pre-configured and customized medical equipment and centralized cellular hubs right to patients' doors. As a ready-to-use solution, Samsung RPM streamlines patient experience and boosts their engagement with remote care.

Samsung's cellular hub features cloud-based management tools that capture data from any type of medical equipment and automatically relay it to healthcare networks. Simplify your patient engagement and metric tracking with Samsung RPM.

Smooth patient onboarding

- * Patients receive their kits pre-configured and ready to use – saving them the time and frustration of setting up complex technology.
- * By working over cellular networks, the patient barrier to entry is lowered by removing the need for high-speed internet or WiFi.
- * Samsung RPM removes the common frustrations of at-home monitoring for patients, helping to reduce program abandonment.

Track relevant information

- * Samsung kits ensure better collection of vital data for common diseases, easily track data points from any medical device including blood pressure and oxygen levels.
- * Reboot and control bots from anywhere in case of implementation failure, or a change in business priorities.
- * Use a web-based portal to help process images and soft copy text by creating templates and classification criteria.

Increase satisfaction, reduce abandonment

- * Using a pre-configured and simplified consumer style tablet – Samsung removes common frustrations that patients have with remote monitoring.
- * Medical kits and control devices can be delivered straight to a patient's doorstep, ready to use from unboxing.
- * Increase patient connection to their own healthcare – bettering their outcomes and reducing risk of abandonment.

Key Functions

Keep patients engaged

Patients can see their own medical data and testing history – helping them stay more connected.

Troubleshoot software remotely

Reduce technology-related house calls and IT burden with remote troubleshooting for Samsung devices.

Reprovisioning and redeployment

Samsung helps providers to refurbish, reprovision and redeploy new kits, lowering IT cost.

Keep resources protected

Samsung Knox protects and focuses tablet devices from off-the-shelf products to single use case devices.

Better data access

View patient data on demand and send reminders to ensure data collection compliance.

Benefits

Tailored solutions for each patient

Samsung RPM is a fully customizable plug-and-play kit; informs us of any individual patient's monitoring needs, and tracking will be delivered.

Reduce patient error

Defaulted tablet mode ensures patients can only use the device for its intended purpose – minimizing error chances.

Minimize revenue loss

Smooth functionality reduces patient frustration and mitigates revenue loss from program abandonment.

Use Cases

Samsung RPM Kits

* Cardiac Rehab

Cardiac rehab improves outcomes for patients who have had a cardiac event. Home-based programs are as effective as in-person programs.

- Patient engagement with care plans
- Monitor activity, track vitals and symptoms
- Achieve compliance management
- Device and program data for actionable insights

* Diabetes Management

Simplified diabetes management kit tailored to each patient with pre-paired FDA-cleared medical devices.

Samsung Diabetes Kit helps patients self-test their blood glucose daily at home, automatically / accurately record their readings and share them with caregivers.
